

Power Grid Storage Solutions

Resilient Storage for a Sustainable Tomorrow

Transcend's SLC Mode solution employs advanced algorithms to extend NAND lifespan, enhance product reliability, and reduce maintenance frequency. With SMART information APIs/SDKs, it enables seamless system monitoring for operational assurance. Additionally, its wide-temperature range (-40°C to 85°C) ensures optimal performance and reliability in diverse and challenging outdoor environments, making it ideal for rigorous applications.

Extreme Lifespan

SLC Mode enhances Flash lifespan by 30 times.

Advanced Reliability

Wide temperature products offer incredible durability, and have been rigorously tested to withstand extreme environments.

S.M.A.R.T. SDK/API

Transcend offers an SDK/API for easier system integration.
